

Air mobility: The key to the United States national security strategy

Since airlift was first used as a tool of national security during the Berlin Airlift, it has grown to deliver passengers, cargo, and fuel to operations worldwide in support of national security. However, Air Mobility Command is the single organization that performs air mobility for the United States. Currently, the Air Force has structured Air Mobility Command for war, yet this command performs operations during times when the US is at peace. Air Mobility Command performs missions to support US military operations in hostile environments as well as humanitarian operations in non-hostile environments. The number of operations requiring mobility air forces has been on the rise since the Cold War ended 10 years ago. These steady-state operations seem to over task mobility air forces. This study centers on the question: Can Air Mobility Commands force structure, organized for two major-theater wars, fulfill that requirement and perform the steady-state operations in today's strategic environment? This study finds that Air Mobility Commands force structure cannot meet its requirements for two major-theater wars and that the current force structure is inefficient in meeting the requirements for steady-state operations.
